

Kitchen Planner

How to plan your kitchen

- First print the last 2 pages so that you can draw on the grid and cut out the outline of the units below.
- Measure your kitchen and plot it on the grid. Note that each square represents 200mm x 200mm.
- Note the position of windows and doors as well as power and plumbing points.
- Cut out the shapes of the units on the Cutouts page and arrange them to your kitchen plan.
- Remember that the wall units hang on the wall above the floor units (avoid the windows with these units)
- Remember you can use more than one of any unit. Simply print more copies of the Cutouts page so that you can cut out more units if needed.
- You might find it easier to work if you glue the sheet to a piece of light card before you cut out the shapes of the units.

NOTE: We are able to custom make anything. Should you want prices of what is possible, please email us to info@milestonekitchens.co.za for more information.

The scale is 1mm : 50mm.

You will find that 10mm on the grid is equal to 500mm in reality.

All units can be made with a 600mm dead end so that another unit can be pushed up next to it at a right angle.

The cornice overlap of the top of the tall units and wall units is different for each range.

We measure tall units and wall units excluding the cornice.

Please remember this in your calculations.

African Allure	57mm	1.14mm on the grid
French Flair	77.5mm	1.55mm on the grid
Swedish Style	25mm	0.5mm on the grid

African Allure

African Allure: Cornice overlaps
by 114 mm in total (57 mm each side)

French Flair

French Flair: Cornice overlaps
by 155 mm (77.5 mm each side)

Swedish Style

Swedish Style: Cornice overlaps
by 50 mm in total (25 mm each side)

Available Sizes - Refer to price list for names of units
